Synchronous Collaborative Problem Solving

- Designed for public use with a “curiosity/organization” feel over “discussion/debate.” I abstracted those sections to their own panes to reduce the cognitive barriers to entry. (TBD: more cheerful colors...)
- Question/answers can have geographic data.
- Applying a context watches for changes on that context... filters and potentially prioritizes related info
- Designed to clip/graft information with an asynchronous version for real-time team thinking. I haven’t created those mockups for yet.

Applied Contexts

- How to end poverty?
- Work with organizations already addressing poverty

Connect Dynamic Answers: *

- Link to spreadsheet query
- Link to Geographic map query
- Etc...

Other intuitive ways to connect...

- Connect to private tree
- Import tree for asynchronous team use
- Etc...TBD

Applied Contexts

* Probably would go on answers, rather than questions. Perhaps answers would open in an iframe to keep perspective?
